EMMET'S DAY.

An Enthusiastic Celebration in Washington — Eloquent Address by Congressman Woodburn.

Emmet's Day exercises in Washington were held in Masonic Temple. Fully 2,000 people were present. Congressman Brady, of Virginia, acted as Chairman, and Congressman Woodburn, of Nevada, delivered the oration of the day. From the Irish World we take Mr. Woodburn's speech, which was received with great applause:

MR. PRESIDENT, LADIES AND GENTLEMEN: I regard it as a wholesome custom for Irishmen to assemble in sweet communion to wreath with flowers of affection the memory of Ireland's youngest and most gifted martyr, Robert Emmet. History contains no name more lovingly enshrined in the hearts of his countrymen, because of the hallowed recollections that cluster around his last, sad, dying hour. I do not pretend that Emmet was learned in the art of war, or that he was a great military organizer, but I do claim that he was the impersonation of Ireland's heart, Ireland's genius, Ireland's purity and Ireland's patriotism. The testimony of his genius is the golden stream of eloquence that rolled from his lips when standing on the brink of eternity, which still murmurs on our ears and keeps his memory green. His speech delivered here to-night is a monument more enduring than brass or marble. The circumstances attending its delivery leave it without a peer. It will be read and spoken by the aspiring youth of free America and free Ireland, too, until time shall be no more. His purity of character is attested by the solemnity of his dying declaration, that in his young lifetime he never raised his voice to assert a lie. His patriotism is manifested by the manner of his death, which in point of barbarity has no parallel in the history of modern civilization. Doubtless you are all familiar with the sad details. On the night before his execution he wrote farewell letters to some relatives, and to his sweetheart, Sarah Curran. He plaited a tress of her hair and pinned it on the lapel of his coat which he wore to the scaffold. He drew a perfect picture of himself surrounded by all the paraphernalia of execution. He kissed his jailer, whose eyes were wet with tears of sympathy for his prisoner. He made a request that he be permitted to die in the uniform of an "Irish Rebel." He loosed his necktie, that the stroke of the executioner's ax might be unerring. His blood leaked through the chinks of the scaffold, and the dogs of Thomas street licked it up. When the head was severed from the body the headsman held it aloft before the multitude and exclaimed: "This is the head of Robert Emmet, the traitor."

Three-quarters of a century have elapsed since the enactment of this bloody drama; enlightened public opinion has now reversed the judgment of the infamous Norbury. To-day the scaffold on which he suffered is regarded as a consecrated thing. The spot whereon it stood is holy ground. The name of the "traitor" has been canonized and stands out in letters of living light on the glorious martyrology of Freedom. I venture to assert that there is not a spot of civilized earth—no matter whether in the palace of the despot or the hovel of the peasant—that the name of the "traitor" is not pronounced with respect. His bones lie in a neglected church; a simple, un-inscribed slab the only indication of their whereabouts. It does seem, Mr. President, that the time is fast approaching when loving hands will carve upon it a suitable inscription. Is it not probable that before the recurrence of this anniversary Ireland will have taken her place amongst the nations of the earth? For nearly 800 years Irishmen have been forced to travel and suffer in the wilderness of persecution; but to-day they stand on the summit of Mount Nebo in full view of the promised land. They are marching shoulder to shoulder, in solid column, to the inspiring music of Freedom. They are led by the greatest captain of the age, Charles Stewart Parnell. His sword has already pierced the Orange (?) center. In his presence sectionalism vanishes like snow before the Summer's sun.

The demand of United Ireland will and must be respected. Give her home rule, and needs not the gift of prophecy to predict her splendid future. Again manufacturing establishments will dot her myriad streams, which now run idly to the ocean, and the busy hum of industry will be heard within her borders. Her white-winged birds of commerce will garish the harbors of the world. Her latent genius, touched by the rod of education, will again burst forth in strains as sparkling as of yore, and College Green will resound with strains of eloquence as pure and lofty as ever fell from the lips of Grattan. Again, she will be the home of peace and plenty, generosity and hospitality, and every

wind that blows will wait a long-lost exile to her shores. It strikes me, Mr. President, that one of the first enactments of an Irish Parliament should be an Appropriation bill. I know, Mr. President, that if you could be a member of it that there would be one, and you would insert a provision that the money would be expended in tearing down the pillar of Nelson on the grandest square of the Irish metropolis and errecting in its stead a graceful monument to the memory of the martyred Emmet.

PLAYING POKER.

Characteristics of the Great American Game Now Fashionable Beyond the Seas.

From the Cleveland Leader.

It is a fascinating game, because in it one's judgment, coolness and pluck count for even more than luck, though some old veterans assert that even "a fool can bet a good hand." But I know that their assertion is too sweeping. A fool cannot bet a good hand so as to get all the money that can be got out of it. To a veteran poker player any mistake of eye or action is an indication to guide him, and I'll defy a fool to take through a good hand "bluff." Round the poker-table a man with anything like acute judgment can gauge his opponents admirably, because more opportunities to do so are offered. It is there that one sees a man as he is, and avarice, generosity, boldness and skill show out first or last generally in the way the player manages his hand. Oh, yes! there is no doubt but that if a man must play cards for money the noblest and best way to play them is in a poker group.

The game is peculiarly an American one. It fits in with the national temperament and I cannot imagine a model poker player without also thinking of the frothy methods in use in many of our great business affairs; methods that make the Americans a "bull" or a "bear" as his inclinations or his interests indicate; that waterstock and bonds and puff up a poor weakling of a railroad until its rails are buried in a mass of debt and everybody "lets go." In all these transactions "bluff," pure and simple, is the dictator and the greater part of the stock in trade, with an elegant assortment of cheek as reserve fund and an inclination to call on "ace high." When the call comes, if it ever does come, a man is often sorely in a poker game or "on 'change." Our great speculators all play poker and have done so for many years. If as boys they had played the game they would have sat on the ends from whence limit bets on a pair of "duces" or "trays" would have come and in an air of innocence would have spread its rays around when the other fellow "dropped out," the "duces" went into the deck and the pot was raked in.

The exodus of the Jews from Russia and Poland has reached extraordinary figures. During 1885 no less than 20,150 left those countries for America alone.

Geronimo and his band were defeated by the Mexican troops and fled to Lieutenant Mans for protection, surrendering unconditionally.

The House Committee on Elections decided the Hurd-Romeis election case in favor of the sitting member, Romeis.

Logan has introduced a resolution in the Senate to do away with Executive sessions.

Another big strike of railroad employees is in progress at Kansas City.

The Atchison and Topeka road propose to build into Texas.

JAMES STERLING.—Of this popular engineer, who died at Wadsworth last Saturday afternoon, the Truckee Republican says:

The wires bring the sad intelligence that James Sterling, an old time resident of Truckee and one of the most popular engineers on the C. P. R. R., is dead at his home in Wadsworth. Mr. Sterling had for nearly 20 years been connected with the railroad here, having gone to work in the machine shops at Sacramento in 1860. From there he was assigned to an engine, and his face has for years been a familiar one to all employees of the road. Others have come and gone but James Sterling has always been at his post of duty. Bugged, healthy and hearty though he was, he has been compelled to yield to a complication of diseases that would have made any one else yield much sooner. His sufferings have been long and continued, and death has at last made a relief. No man ever enjoyed the entire respect and confidence of his friends to a fuller extent, and his genial face will long be missed. He is Scotch by birth, and about 42 years old. He leaves a wife and three children, two boys and a girl, who will miss a kind husband and an indulgent parent.

The demand of United Ireland will and must be respected. Give her home rule, and needs not the gift of prophecy to predict her splendid future. Again manufacturing establishments will dot her myriad streams, which now run idly to the ocean, and the busy hum of industry will be heard within her borders. Her white-winged birds of commerce will garish the harbors of the world. Her latent genius, touched by the rod of education, will again burst forth in strains as sparkling as of yore, and College Green will resound with strains of eloquence as pure and lofty as ever fell from the lips of Grattan. Again, she will be the home of peace and plenty, generosity and hospitality, and every

BASEBALL.

An Interesting Game Sunday Between the Typo and Dude Clubs.

Sunday was a fine day for baseball playing, being just cloudy enough to break off the heat of the sun. At one o'clock the grounds were crowded with spectators, including quite a number of ladies, anxious to see the game. The Typo girls appeared in their new uniform, and the two clubs looked fine, the dudes dressed in white and the prints in dark garnet suits. The boys on both sides took great interest in the game from beginning to end, and showed considerable improvement in their playing, especially the Typos. The score is lowered each Sunday, and we expect to see it stand one to nothing before the season is over. The umpire did the best he could considering that he had not read up or paid much attention to the late rules, and of course was kicked at as usual. The score stood as follows:

TYPOS.

	TB.	R.	O.	E.
Rice, c.....	7	4	2	4

Time of game—Two hours and ten minutes.

Umpire—R. H. Heriot.

Scorers—H. Remington and H. Harwood.

FRANK LESLIE'S POPULAR MONTHLY.

The prolonged Winter made ice-yachting possible even into what is generally regarded as Spring, so that the attractions and perils of this peculiar amusement are still fresh in the mind. Mr. Stephens, in the April number of Frank Leslie's Popular Monthly gives the history of these vessels, their present peculiar forms, and describes vividly the exhilarating sensations, of a spin over the glassy ice in one of these fleet vessels.

Mr. F. B. Mayer takes us from the ice and its pleasures to the balmier Chesapeake and introduces us to the old towns and manors of the western shore of Maryland giving illustrations from his own artistic pencil.

Lily Higgins, under the title of "Romance of a Court," gives a most interesting account of the late King Alfonso of Spain. F. C. Valentine initiates us into the mysteries of "Indian Sign Language in Central America." Lawrence Hutton revives recollections of "Infant Phenomena" who have pleased with their precocious talent our forefathers or ourselves, from the days of young Betty, brilliant in boyhood, and dull in maturity.

The story of the artist, Gustave Doré, is graphically told by H. Tyrell. "Meals and Mewtime" is a subject certain to attract, while "The Frenchwoman in the East" tells of two recent French travelers of the fair sex.

A very curious article by a naturalist on what are popularly called India's Eyes solves all the mystery about these curious objects, concerning which so many absurd stories have been running the rounds.

The stories are all good. Besides the "Daughters of Cain," by Eva W. Pierrepont, there are short stories by Walter Edgar McCann, C. L. Hildreth, George Kirby, Elinor Brooke, and Clarence M. Boutelle.

Nervous Debilitated Men.

You are allowed a free trial of thirty days of the use of Dr. Dye's Celebrated Voltaiac Belt with Electric Suspensory Appliances, for the speedy relief and permanent cure of Nervous Debility, loss of Vitality and Manhood, and all kindred troubles. Also for many other diseases. Complete restoration to health vigor and manhood guaranteed. No risk incurred. Illustrated pamphlet by addressing Voltaiac Belt Co., Marshall Mich.

To the Ladies of Reno—Business Change.—Miss Sadie Sykes tenderers her best thanks to the ladies of Reno and vicinity for the patronage and support they have given her for the past three years, and desires to inform them that she has this day disposed of her business to Mrs. Hessel, for whom she solicits a continuance of their kind patronage and support.

Referring to the above Mrs. Hessel respectfully solicits a continuance of the patronage so liberally accorded to her predecessor, and assures the ladies of Reno and vicinity that her untiring efforts will be put forth to keep the business up to its former high standard. Her knowledge of the business, combined with the services of a first-class assistant, will insure perfect satisfaction at all times.

Reno, Nev. March 1, 1886.

Advice to Mothers.

Are you disturbed at night and broken of your rest by a sick child suffering and crying with pain of cutting teeth? If so, send at once and get a bottle of Mrs. Winslow's Soothing Syrup for Children Teething. Its value is incalculable. It will relieve the poor little sufferer immediately. Depend upon it, mothers, there is no mistake about it. It cures dysentery and diarrhea, regulates the stomach and bowels, cures wind colic, softens the gums, reduces inflammation, and gives tone and energy to the whole system. Mrs. Winslow's Soothing Syrup for Children Teething is pleasant to the taste, and is the prescription of one of the eldest and best female nurses and physicians in the United States, and is for sale by all druggists throughout the world. Price 25 cents a bottle. feb. 21-swf-lvr

For the very best photographs go to Dunham & Kelsey's new photo parlors, Plaza street, Reno, Nevada, N. B.—This establishment is all on the ground floor; no stairs to climb.

TUESDAY.....MARCH 23, 1886.

TOWN AND COUNTY.

BREVITIES.

Passenger travel continues heavy.
Bird seed in bulk 10 cents at Nasby's.
Jersey McDonald is going to Lake Tahoe.

Senator Westerfield was in town Sunday night.

Five lead pencils for 5 cents at Nasby's.

Lubin's genuine extracts 60 cents at Nasby's.

One-quarter ream note paper 20 cts. at Nasby's.

Allen Bragg has returned to his Long Valley home.

Murray & Lanman's Florida Water 50 cents at Nasby's.

Three one pound packages of bird seed 25 cents at Nasby's.

Theo. Winters and Johnny Novacovich have returned from California.

There will be a meeting of the Trustees of the Golden Fleece M. Co. to-day.

Mrs. R. P. Chapin went East with Mrs. Dawson and Mrs. Wugar Sunday morning.

The article elsewhere about the University is copied from the Virginia Enterprise.

Ed. Verrill, the old and popular conductor on the V. & T. R. R., came up from the Bay yesterday.

Members of the Guard are ordered to appear at their Avery on Wednesday evening at 7:30 o'clock.

Col. W. O. Mills has received his commission as Receiver of Public Monies in the Eureka Land Office.

M. E. Ward and J. J. Becker have Curtis working on plans for new houses. S. Jacobs is also planning to build this Spring.

Senator Ingall's chief weapon is said to be sarcasm, but Brooking deals in articles less cutting, such as cigars, tobacco, stationary and blank books.

Daniel Holland, who was appointed Postmaster at Candelaria some two months ago, has returned his commission to the Department at Washington and declines the office.

The laundry building will be located on Front street, back of Mulcahy's factory. It will be 30x60 feet. The Board has elected W. H. McMonica superintendent, and he will start in at once.

The members of Washoe Engine Company No. 2, are requested to meet at their engine house on Wednesday evening, the 24th inst., for the transaction of business of unusual importance.

Samuel Lattin has sold his Reno property to H. A. Smith, W. O. H. Martin's clerk. Sam and family left Reno yesterday morning for Chemung county, New York, where they go to permanently reside.

Richard Ryland has sold his elegant brick residence on Nob Hill, Eureka, to J. G. Ford, the sheepman. Mr. Ryland, wife and family will leave for Reno during the coming fortnight, where they will hereafter reside.

THE JUDICIARY BILL.—In the report of the late grand jury of Douglas county, the following appears: "We have also had under consideration the Judiciary Act of 1855, limiting the number of District Judges to three and dividing the State into one Judicial District, and we are unanimous in our disapproval of the same, and regret the hasty and ill-advised legislation which created it—as we believe the present arrangement of our judicial system to be a good one; and so far as our county is concerned it has always proven satisfactory to all."

ADVERTISED LETTERS.—The following is the list of advertised letters remaining in the Reno, Nevada, Postoffice, Saturday, March 20, 1886.

Dumas, Mose Scott, James
Goheen, Leoward Sylvester, E. P.
Holt, W. Tabon, J. T.

THE STATE UNIVERSITY.

Its New Home and Its Future Work.

The Courses of Instruction, Terms of Admission and Regulations—The Cap-sheaf of our Educational System—The University Library and Museum—The First Catalogue.

The first Register, or Catalogue, of the University of Nevada has just been issued. It is a very handsome pamphlet of nineteen pages, and is one of the neatest specimens of the typographical art turned out by State Printer Harlow. Since the Legislature passed an Act transferring the University from Elko to Reno, a great deal of work has devolved upon the present Board of Regents. The result of their labor is shown in the Register, which gives a history of the University from the date of its foundation in 1873, to the present time. The new building, a sketch of which appears above, is located on a very picturesque site less than one mile north of the railroad depot at Reno. The plans for the building were drawn by Mr. M. A. Curtis, the well-known architect, the ideas which he was to translate into the technical terms of his profession having been imparted to him by Regent Shaw. Messrs. Burke Brothers, of Reno, had the contract for the erection of the building, and considering the small amount paid to them (\$12,700), the builders have not only given great satisfaction, but have demonstrated that Nevada mechanics are equal to the production of work which will challenge comparison with the best anywhere else. In material, character of workmanship and finish the Nevada State University building will stand the most searching criticism.

THE NEW BUILDING

Is built of brick, having a stone foundation. Both the basement and mansard roof floors are well lighted, commodious and adapted for school purposes. The basement is divided into four rooms for the janitor, stores, assay furnaces, quartz crushers and workshops. The first floor is approached by a broad flight of steps leading to fine vestibule and hall. On the left hand side are the Principal's office, reception room, Regents' room, library and museum; on the right hand side the Assayer's office, assaying room, weighing room, lavatory and gymnasium. Ascending to the second floor the visitor will find a large lecture hall on the right and two fine class rooms on the right hand side. The third floor has two large apartments, a general assembly room and an armory.

THE FACULTY.

The faculty at the present time consists of but two instructors, Professor A. H. Willis, A. M., who is in charge of the Scientific and Mining Department, and Professor J. W. McCammon, B. A., who is principal of the Preparatory Department, and who supervises the academic branches. Both gentlemen are college graduates and have had experience as teachers. Professor Willis is a graduate of Princeton college, New Jersey, and Professor McCammon is a graduate of the Ohio Wesleyan University, at Delaware, Ohio.

THE OPENING.

March 31 is announced as the day for the beginning of the term, but it is doubtful whether the institution can be fairly launched before the middle of April. Meanwhile, all who desire to enter as students should make application to either of the Professors at Reno, or of any member of the Board of Regents—J. H. Rand at Elko, L. W. Getchell at Austin, and H. G. Shaw at Virginia City.

From the Register we take the following information, which is of interest to all concerned:

PLANS FOR THE FUTURE.

In its new location the Board of Regents will now to secure the hearty sympathy and earnest co-operation of the people of Nevada in making the University a credit to the State. The limited appropriations for its support will not permit of much being done at the outset beyond laying a foundation for more advanced educational work in the future. The immediate object will be to make the Preparatory Department superior to the higher grade of our public schools, and thus advance the cause of education by having an institution of which the said schools are to be the feeders. The courses of instruction will

be based upon the modern ideas of education, which subordinate the purely classical and literary features to practical and scientific culture, and which aims to impart to the student those elements of human knowledge which can better prepare him for progress in scientific studies. The central idea will be to cultivate the perceptive faculties, the reason, the judgment and the taste, rather than the attempt to nurse into being prodigies of learning whose power is chiefly expressed in their abilities to memorize and mutter dead formulas. The University of Nevada will endeavor to assist its students to acquire sound mental discipline, liberal culture and a good preparation for the practical duties of life. While there is no royal road to knowledge, and while intellectual growth is with the average man the fruit of self-denial, industry and hard work, the Regents recognize that education, like other sciences, has made rapid advances, assimilated new ideas and adopted new methods of work, the application of which in the class-room promotes a more vigorous development of the intellectual faculties. The system of instruction will therefore be advised not so much to seek a dead uniformity of culture on some ideal grade as to discover and develop the natural capacity of each particular student, to foster his latent talent, to ascertain his purpose, aim, object and motive in life, and to meet his first and highest need, which is to have all the elements of manhood within him developed, quickened and energized.

Courses of Instruction.

There are established in the University three regular courses of instruction:

THE LITERARY COURSE

Will embody preparatory studies for the higher branches of an English education, and will embrace a period of two years. Those branches will be taught which are required for admission into the Freshman class in colleges. Special attention will be given to the English language and literature, to the ancient and modern languages, history and political science, commercial arithmetic, book-keeping, algebra to quadratics, botany, penmanship, elocution, physiology, civil government, composition, mechanical, industrial and map drawing and physical geography.

SCIENTIFIC COURSE.

Algebra, including the progressions, series, logarithms, combinations, binomial theorem, general theory of equations, solution of numerical equations of higher degrees; Horner's method; geometry to conic sections; physics, "Picks Ganot" introductory course, surveying, meteorology, chemistry, inorganic (including qualitative analysis), and geology.

MINING AND METALLURGICAL COURSE.

The course in mining is designed for students who wish to become mining or metallurgical engineers, or to engage in one of the many pursuits connected with the mining industries, such as the surveying and mapping of mines, the assaying and working of ores, the designing and use of mining machinery, or the exploitation of mines. As a means of instruction in this department, great reliance will be placed upon the actual seeing and handling of substances under consideration. This fixes in the mind the theories of the science as well as the properties and uses of the various forms of matter. The personal observation on the part of the student in the laboratory is well nigh indispensable. Hence, laboratory practice occupies an important position among the methods of instruction in this department. Lectures and recitations from the text books are, however, by no means slighted; the main work is accomplished by them, laboratory practice being supplementary. The metallurgical laboratory is provided with assay furnaces and all the appliances necessary in assaying the precious metals, lead, copper, etc. The student will learn the method of assaying by actual practice, as well as by the study of books. Blowpipe analysis will be an important feature of this course, and the student will be afforded every opportunity for becoming a skillful blowpipe analyst and assayer. The practice in assaying will be accompanied by the study of all the common metallic ores (from specimens in the University Museum), their properties, methods of reduction, etc. To receive the greatest benefit from this course the student

should have some previous knowledge of chemistry. Preliminary to the purely technical studies of the course, the student will receive sufficient training in those branches of modern physical science which lie at the basis of all industries connected with mining—on the one hand, mathematics and its applications, and on the other, chemistry and its allied branches.

Instruction is given according to the nature of the subject, either by lectures and recitations, or by practical exercise. Lectures will be delivered on crystallography and the physical properties and uses of the most important ore, gangue and rock-forming minerals. Considerable time will be devoted to practice in the determination of minerals by the use of the knife, lens, and streak plate. The course in mining includes instruction in the nature and mode of occurrence of ores, prospecting and exploring ore deposits; United States laws governing location of claims, open cut and quarry work, hand and machine drilling, explosives, blasting, tunneling, with methods of excavation and timbering, shaft-sinking, timbering and walling, stoping framing, hoisting, pumping and drainage, lighting, hydraulic and river mining, general organization and administration. The course is illustrated by drawings, sketches, data, and references to typical mines in operation on the coast. In Metallurgy instruction will be given in the classification of ores and processes, crushing and sampling ores, fuels, fluxes, refractory materials, furnaces, accessory machinery and metallurgical products. The metals selected are the ones at present most important on this coast—gold, silver, lead and quicksilver. Both wet and dry methods of reduction will be taken up and discussed in detail. The illustrations and data will be drawn, as far as possible, from actual work on the coast. The fire assays accompany each metal in the course on metallurgy, and the instruction will be conducted, as far as possible, to illustrate the methods of reduction used on the large scale. Particular attention will be paid to the fire assays of ores of gold, silver, lead and quicksilver.

TERMS OF ADMISSION.

Candidates for admission to the University must be at least fifteen years of age, must produce a certificate of good moral character, and pass a creditable examination in reading, writing, spelling, arithmetic, English grammar and descriptive and physical geography. Any applicant failing below seventy percent, as the result of the entire examination will be rejected. Tuition in the University is free. A small charge will be made for chemicals in the Chemical Laboratory. The list of text books required will be announced hereafter. Students from abroad are required to board at places approved by the Board of Regents. Applications for admission may be made either to the instructors at the University at Reno, or to any of the Regents: H. G. Shaw, at Virginia City; J. H. Rand, at Elko, and L. W. Getchell, at Austin, Nevada.

TERMS AND VACATIONS.

The first term of the current academic year will begin on March 31st and will close on June 21st. The second term will begin on July 15th and will close on November 15th. The first term, second year, will begin on January 6, 1887, and close on April 14th, 1887. (April 14–21, Spring vacation.) Second term, second year, begins April 21st and closes on June 21st. The usual legal holidays will be observed.

EXAMINATIONS.

At the end of each term all students will be examined on the studies pursued, and the result of these examinations determines their standing. Reports will be sent to parents or guardians.

REGULATIONS.

All students are expected to devote their time exclusively to the work of the University. No student will be allowed to remain in it who, by misconduct or indolence, shows himself to be unworthy of its benefits. Profane language is forbidden, and the use of ardent spirits, gambling or card playing, frequenting saloons or billiard rooms, associating with any person of known vice or dissoluteness, leaving school without special permission, riotous and noisy behavior, are absolutely prohibited. Every student will be required to obey the rules and regulations established for the gov-

ernment of the University. Any damage to the buildings or property of the University will be charged to the student through whom it was sustained.

THE UNIVERSITY CADET CORPS.

One of the conditions of the Congressional grant under which the institution has been endowed is that military tactics shall be taught. The students of the University will therefore constitute a Cadet Corps, and military discipline will prevail. Application will be made in accordance with Section 1,225, United States Revised Statutes, to the Secretary of War for a field piece and stand of arms with which to equip the corps. A weekly drill in infantry tactics will be held under the instructor, and a rifle range for instruction in marksmanship will be built in the vicinity of the University.

THE UNIVERSITY LIBRARY.

The Legislature at its last session appropriated the sum of \$500 for the purchase of books. This will enable the Regents to establish a nucleus for a good reference library of standard works in English literature and in the arts and sciences. The leading magazines and periodicals devoted to scientific progress and discovery will be kept on file for the use of the instructor and students. All donations to the library will be welcome and will be duly acknowledged in future University Registers.

THE UNIVERSITY MUSEUM.

In mineralogy a good beginning has been made, the Regents having received from Hon. C. C. Thomas, the Commissioner for Nevada to the New Orleans Exposition, and from H. M. Yerington, Esq., a choice collection of mineral specimens as a contribution to the Mineralogical Cabinet. Additional contributions from all quarters will be gratefully acknowledged. The Regents hope to be able by a system of exchanges with leading institutions and naturalists in all parts of the United States to secure a cabinet of natural history, containing a very satisfactory representation of the plants, insects, birds, minerals, and fossils, not only of the State of Nevada, but also of the whole of North America. Mr. Frank Bell, Warden of the Nevada State Prison, has presented to the cabinet a series of plaster casts of the foot-prints discovered in the quarries connected with the Prison; also, a number of remarkable rocks excavated from the quarry.

Contributions to the Library and Cabinet may be sent as freight or by express at the expense of the Board of Regents. The Board hope in time to obtain by gift, exchange and purchase, collections for the University Museum, representing the following departments: Fine Arts, Classical Archaeology, Ethnology, Zoology, Entomology, Botany, Historical Geology, Palaeontology, Mineralogy, Petrography, Economic Geology, Metallurgy, Mechanics and Engineering (machines, models, etc.), manufactured products and textile fabrics.

CONCLUSION.

The animating and informing spirit of the Nevada University will be work. Every student will be invested with the responsible work in the line of his studies. The students will take turns in acting as curators of the different departments of the Museum, as librarians as meteorological observers, in helping to ornament and beautify the grounds, and in assisting the instructors in performing the clerical work of the institution, the idea being to encourage and stimulate habits of self-application and industry. Every effort will be made to afford agreeable recreation and amusement for the students, and for this purpose a gymnasium will be provided, which the Regents hope in due time will be thoroughly equipped.

NEW BOOKS.—The State University library last week received Reports on Mexico, two books; four pamphlets from the Department of Interior; Report of Secretary of the Treasury, 1885; Elements of Chemistry, from D. C. Heath & Co., Boston, Mass.; Gymnastic Manual, Ginn & Co., Chicago, Ill.; Historical Sketches of Univ. and Col. of the U. S.

GOVERNMENT BUILDING AT CARSON.—The wrangle over the Government building at Carson came to an end Saturday by the owners of block 11 accepting \$1,000 and giving the Government a release. The building will now be located on the Opera House block, and the Opera House will be moved to the next block—the Arlington.

FOR SALE.

NEVADA STATE FAIR, 1886.

SEALED PROPOSALS.

MISCELLANEOUS.

BOARD OF COUNTY COMMISSIONERS
of Washoe County, Nevada, March 1, 1885.

Sealed proposals will be received by the Board of County Commissioners of Washoe county, Nevada, up to 10 o'clock A.M. on the first Monday in April, 1886, for the care and sustenance of the Indigent sick and poor of Washoe county. The person receiving the contract to have the use of the County Poor farm and premises, where county wards are required to be kept. The contract to be for the care of eight persons or less, and for a given rate per week for each person provided for in excess of eight.

Similar proposals will be received at the same time for the services of a County Physician, to attend the Indigent poor of Washoe county, which shall include attendance at the County Hospital, County Jail, and elsewhere in the county when required. Post Mortem examinations and examining insane persons. The physician contracting to furnish at his own expense all drugs and medicines required, the physician's necessary traveling expenses when called to visit indigent poor residing more than one mile from Reno, will be paid by the county.

Also bids will be received for the burial of the indigent dead of Washoe county for one year.

Also for doing all county advertising and printing, other than blanks for the period of one year.

All contracts to commence on the first Monday in April, 1886, and end on the first Monday in April, 1887.

The Board Reserve the right to reject any and all bids.

By order of the Board.

T. V. Justice, Clerk.
